

UltraClenz Introduces its Newest Hand Wash Management System - The ProGiene® G3™

Florida – April 1, 2006 – UltraClenz, LLC, a Florida based hand hygiene technology firm Introduces the **ProGiene G3™** Hand Hygiene Monitoring System. This latest hand wash management system offers expanded functionality that solves the problem of hand wash compliance improvement at an affordable price. The **G3™** is the most innovative tool available for increasing hand wash compliance and decreasing the spread of infectious diseases. The G3 system will help its users increase the quality and quantity of hand washing, which has been determined by Health Departments, the CDC, and Food Safety Organizations as the #1 way to reduce infections.

David J. Stob, President of UltraClenz, commented, “UltraClenz products were designed to be simple and cost effective while fulfilling a tremendous need in the general world market today. Our company’s goal is to focus on the prevention of food borne illnesses and nosocomial diseases. The **G3™ Hand Wash Monitoring System** ensures that management, employees and customers alike learn the basic hand wash requirements to avoid the spread of infectious diseases. This is the first step in the cycle of prevention.”

The new **G3™** includes an integrated touch-free soap dispenser with a refillable bottle that may be replaced with a generic 800ml bag. It also includes a touch-free faucet adaptor (*ProSense*), a device designed to convert a mechanical gooseneck faucet into touch free operation. One of the key features of the **G3™** is that it disables water activation during the programmed lather period. This feature, along with a built in microprocessor technology and a liquid crystal display (LCD), is supplied in one compact unit.

The **G3™** was designed to accommodate individual hand washing needs by integrating a programmable memory. Configuration options include lather delay times, which range from 5 to 60 seconds, and soap dispensing volumes, which range from 1 to 5 ml per activation. Up to 240 **G3™** systems can be networked to a single PC allowing each system to be configured and monitored in real time through the provided software.

The LCD displays the total daily and cumulative historical number of hand washes. This total can be reset at any time via a key switch located on the **G3™** or via PC if a networked. Only successful hand washes that meet the specified requirements are counted and recorded by the system. Daily hand wash totals are detailed on a hand wash report for the past 90 days with trends for 5, 10, 30, 60 and 90 days.

G3™ is designed to bridge the gap between **ProGiene®** (*our flagship HACCP compliance hand wash monitoring and record keeping system*) and the basic industry soap dispenser. Its goal is to provide a simple low cost solution to the hand wash compliance risks in the greater food service industry. **G3™** provides operations with tools that the person in charge needs to protect your brand, reputation, and customers from the risks and effects of food borne illnesses.

About UltraClenz

Since 1995, UltraClenz LLC (UC), headquartered in Florida, has been creatively integrating information technology with proper hand hygiene. UltraClenz is an original equipment manufacturer of touch-free dispensing and sanitizing solutions for distributors and end users throughout the world. We have a vast array of products ranging from touch free soap & sanitizer dispensers, touch free hand wash sink conversion kits, and complete HACCP monitoring equipment.
