

ProClenz Monitoring Systems

A modular approach to monitoring hygiene dispensing using the Bentley (WiNet) wireless dispenser network. Upgrade your UltraClenz dispenser to a wireless monitoring system and get more out of your dispenser.

Supply Logistics

- Monitor dispensers for low batteries.
- Know when soap or sanitizer cartridges need to be replaced.
- Evaluate chemical usage per dispenser, location, product, etc.

Group monitoring by activation of dispenser

- Monitor dispenser by location, date, time stamp.

Doorway monitoring

- Simply attach a PIR device to an UltraClenz dispenser and monitor the number of entry & exit events by location, date time stamp.
- The PIR can be used as a door monitor or as a section or room divider.

Individual monitoring of hygiene events

- Add an RFID card reader to your PIR and monitor not only the event but WHO is triggering entry & exit events.
- The card reader is used in conjunction with an RFID badge to be able to identify an individual.

System Advantages

- Modular upgradeable unit.
- Works with ProClenz and non UltraClenz dispensers.
- Battery powered, cable free connections, means relatively easy and low cost installation.
- UC proprietary software for analyzing and archiving data.
- Self sustained and independent network infrastructure. Does not require the use of the installations facility's existing IT/Network. Individual Server not required.
- Wireless data analysis on and off the installed premises. Remotely accessible.
