

ProGiene GMS (Group Monitoring System)

The ProGiene GMS is ideal for businesses that want to include hand washing as part of their safety program. This is a compact and powerful hand wash management system designed to increase and sustain hand wash quality while providing management with both a daily and cumulative total of completed hand washes. Only hand washes complying with management's standards are counted and recorded.

The ProGiene GMS system is comprised of a touch-free faucet adapter (ProSense) and an intelligent touch-free soap dispenser. Both are integrated together to form a complete touch-free hand washing solution.

The ProGiene GMS can operate as a stand-alone system or on a network with up to 240 ProGiene GMS systems.

As a stand-alone system, the ProGiene GMS can provide management with a simple, yet effective, tool for monitoring hand wash activity and enforcing proper employee hand hygiene habits.

As a networked system, the ProGiene GMS becomes a powerful management tool by reporting hand wash statistics and trends for the past 90 days. A networked system also allows for remote system configuration and real-time hand wash counts both daily and cumulative.

-  Can be used as a complete system with or without ProSense to monitor dispensed sanitizer (Stand Alone)
-  Teaches the correct hand wash sequence and protocol
-  Hand wash compliance guided by LCD
-  Daily and Total Wash Count Displayed on LCD
-  Programmable water suspension/lather time reduces water consumption (ProSense)
-  Saves approximately 1 gallon of water per wash
-  Adjustable Soap Dosage
-  Refillable soap cartridge or 800ml bag
-  Downloadable data via a handheld Data logger
-  Hand hygiene activity reports for up to 90 days
-  Monitor and/or configure in real time via PC

* Patent Pending
