

ProSense (Faucet Adapter)

ProSense is a faucet adapter developed to convert existing mechanical gooseneck faucets into touch-free operation. By attaching our universal dual infrared (IR) sensor to the neck of the faucet, almost any existing sink can be converted into touch-free operation.

The ProSense dual IR sensor features a wide and adjustable activation range of 4" to 10" and can adapt to almost any sink. The sensor can be mounted onto any gooseneck or D-arm faucet stem with an outside diameter between 5/8" and 13/16".

ProSense is supplied with one or two electrical solenoid valves that enable the flow of water when the sensor is activated. The use of solenoid valves allows the water flow rate and water temperature to be easily adjusted using the faucet's knobs.

ProSense is an easy and affordable way to upgrade existing faucets to safe and convenient touch-free operation.

-  A Touch-free faucet adapter that converts any gooseneck faucet into touch-free
-  Dual IR sensor allows consistent activation
-  No Plumbing Necessary
-  Saves hundreds \$\$\$ on labor making it an economical way to add touch-free to the faucet
-  Control box has 24 hr. battery back up
-  Allows the dispenser and faucet to communicate

ProSense II (Faucet Adapter)

A touch-free faucet adapter that allows the dispenser (GMS) and faucet to communicate and function as a complete touch free sink. It completes the hand wash cycle by allowing for a timed water suspension during the lather stage of the hand wash. ProSense may also be installed independently to simply provide touch-free faucet activations.

-  Can convert most faucets into touch-free operation
-  Dual built in IR sensor allows consistent immediate activation
-  No plumbing necessary
-  Saves money by preventing water from needlessly running down the drain
-  Saves hundreds \$\$\$ on labor (Less than 10 minute installation)
-  Control box has 24 hr. battery back up

* Patent Pending
